

**Attention: Engineers, Consultants and Water Supervisors**

**SCE Energy Education Center**

**6090 North Irwindale Avenue Irwindale, California 91702**

**December 7, 2016**

**8:30 a.m. - 3:30 p.m. (Lunch Included)**

**Cost: Free**

**Gain Six (6) Hours - CEUs**

**[\(SCE Registration\)](#)**

**Please note that this is the last GPC seminar until April 2017**

**Seating is limited, so make your reservations today!!**

SCE is hosting their workshop featuring **Mike Bodart of General Pump Company** who will be providing valuable information, including but not limited to, the design or redesign of pumps with special emphasis on *GPC's water flush pumps*. Is your *well casing* in poor condition? Learn how to design a liner to extend the life of the well fifty (50) years and not lose any capacity. The topic of well development techniques that should be used in well rehabs will be discussed.

**Todd Eden of HCT, LLC** will be presenting as well. Todd has more than 30 years of experience in chemistry and water processes, working with organizations including Xerox, Motorola, the United States Navy and Los Alamos National Laboratories, Todd Eden, founder of HCT, LLC and an empirical chemist, demonstrates scientific and laboratory research on what we do as an industry that compromises the lifespan of our water wells and water quality. This presentation will show how the improper use of chlorine, one directional energy, phosphoric, sulfamic, citric acid and conventional industry practices can actually contribute to the premature deterioration of water well production while increasing operating costs.

**Check out the website and register [\(SCE Registration\)](#).**

**This workshop is definitely worthwhile and one you won't want to miss!!**
